

Concrete cooking: kitchen meets concrete

Every week, new concrete countertops leave our plant in Altstätten in Switzerland. They decorate kitchens of all top brand names and lend them a distinct character.

Let us correct some of the popular misconceptions about concrete as a kitchen material with proven facts:

- Concrete Marks
- The **Dade surface coating** will protect your countertop from the effects of moisture and acids for up to 12 hours (e.g. a glass of red wine is not a problem).
- Our countertops **weigh less than granite or marble**.
- We start with countertops that are **2 cm thick** and manufacture them in **lengths up to 5.20** metres long x 2.4 metres wide without seams.
- Our production facilitates the use of inset concrete sinks and ceramic hobs mounted flush with the countertop.

First Impressions

You can best experience the wonderful look and feel by gaining first hand experience of our concrete at one of our selected retailers and marketing partners. You will find the contact addresses of dade-design dealers in your area as well as additional images and information about our concrete kitchens at www.dade-design.com/concrete-kitchen.

Unique pieces in concrete

Today dade-design is the leading Swiss manufacturer of designs in concrete and a true pioneer in the development of new high-end applications for concrete. In essence we firmly believe that our concrete works!
